

AAPT SIP VOICE

AAPT SIP Voice is a premium voice service delivered over our extensive Ethernet network that allows you to maximise the capability of your IP phone system. Not only does this enable you to benefit from the increased functionality and seamless integration of your existing equipment, but you will also receive a highly scalable and cost effective solution.

1 FLEXIBLE SOLUTIONS TO MEET YOUR GROWING BUSINESS NEEDS.

AAPT has delivered voice solutions to Australian businesses since 1991 and IP based voice solutions since 2006. In any one month, AAPT on our own network connects over 100 Million voice calls.

Capacity on demand

Not all businesses have the luxury to scale their telephone lines for that unexpected busy hour. AAPT SIP Voice provides you with traditional 10, 20 or 30 line capacity for your day to day calls, as well as giving you the ability to “burst” above this initial allocation to cope with unexpected demand.

Scalability built for your business

As your business becomes more successful, the demand on your telephone setup grows. AAPT SIP Voice allows you to add lines easily and efficiently, without the hassle of waiting for new lines or hardware to be installed.

This also means that there is no need for staff or phone system maintainers to enter your site – everything is completed over the network seamlessly and cost effectively.

Easy to use

If you require to stage the implementation of your voice solution and integrate only a limited number of SIP lines this can be achieved. AAPT SIP Voice can easily assimilate into your existing IP phone system via the Ethernet port, allowing your SIP and phone lines to operate concurrently.

2 SOLUTIONS BUILT TO MEET YOUR UNIQUE REQUIREMENTS.

1. Intelligent centralised number hosting

Businesses with multiple locations are constantly spending time and resources managing duplicate telephony infrastructure across their sites.

With AAPT SIP Voice you can route all of your business calls – irrespective of location – through one central site. Not only does this reduce the need for duplicate telephony infrastructure across your organisation, it also allows your business to still make local calls from their respective sites.

2. Solutions for complex requirements

Many businesses require a telephony setup which is flexible, adaptable and specific to their call needs.

Through our expert Network Engineers and Voice Specialists we will work with you to develop a SIP Voice solution which will meet your unique requirements. Features of some of our solutions include;

- flexible calling plans
- centralised national number hosting
- super trunk capability
- diverse carrier platform
- multiple levels of redundancy

3. Future proof your communications

Businesses today are seeking to simplify their voice and data networks and merge them into a single access line. AAPT SIP Voice enables you to run both voice and data over one line.

3 ENJOY COST EFFICIENCIES AND CUSTOMISED SOLUTIONS.

Keep your existing numbers

A business telephone number is critical for communication with your customers.

That’s why we provide the option to migrate your existing numbers to AAPT SIP Voice seamlessly and efficiently.

Flexible call tariffs

A business call profile will always vary. Because of this AAPT SIP Voice offers you a range of flexible plans to fit your business.

Whether your calls are constant or seasonal, local or long distance, we will build the most cost effective solution to match your business’ unique calling pattern.

Simplify management

- Make life easier with one provider, one bill and one point of contact.
- Receive 24/7 support to minimise hassles and improve business continuity.
- Access AAPT Online Bill Analyser to analyse costs, reconcile accounts and identify savings.

As you can see, AAPT SIP Voice provides you with a wide range of calling, cost and service benefits.

Contact AAPT for more information on how SIP Voice can help your business.
