

INTERNET AAPT IP-LINE

Delivered over AAPT's powerful IP network, AAPT IP-Line provides your business with a dedicated connection to the Internet that supports 'mission critical' and bandwidth hungry applications.

1 DEDICATED CONNECTION

At AAPT we understand that a powerful Internet service is crucial for any business looking to attain maximum efficiency. As such, AAPT's IP-Line has been designed to deliver optimal performance through a dedicated and reliable connection.

Superior performance and availability

Only the very best Internet services incorporate high performance with consistent service availability.

AAPT IP-Line connects directly to AAPT's advanced IP/MPLS network to deliver a powerful yet cost effective service that is backed by 99.95% service availability.

High-speed to your needs

AAPT IP-Line offers high speed, fibre optic grade bandwidth that can be personalised to suit the needs of your business.

You can choose from a range of connection speeds from 2Mbps to 10Gbps and vary your selected speed as your requirements change.

Tier 1 peering relationships

We recognise that the quality of your Internet service is highly dependent on reliability, consistency and performance.

That's why AAPT has a number of direct peering relationships with other Australian Internet Tier 1 service providers to ensure your AAPT IP-Line service is as comprehensive as possible.

2 FLEXIBLE AND COMPETITIVE

With so many Internet providers and plans in the market it can be difficult to choose the right solution. Recognising this, we've designed AAPT IP-Line from the ground up so that it meets your business needs.

Flexible IP Data Plans

- Usage based – enables you to pay only for the data you have used within a particular month. Additionally, the price per gigabyte will decrease when your usage goes to a higher usage tier.
- Prepaid – allows you to select a plan you are happy to commit to for each month.
- Flat rate – provides you with unmetered access to the Internet on a chosen speed.

Charge for Download Usage Only

Many businesses enjoy the flexibility of monitoring their download usage on a month per month basis.

When you choose an AAPT IP-Line Usage-Based or Prepaid plan, you only pay for data downloaded from the Internet. This also gives you more value for your money because data uploads are free of charge*.

Aggregated Prepaid Plans

AAPT IP-Line provides the ability to aggregate IP usage for customers with Internet requirements at multiple sites.

This enables you to minimise the cost of Internet data across selected sites - or across your organisation as a whole - while still being able to monitor specific site usage.

3 MAXIMUM PERFORMANCE

As well as being a next generation product, AAPT IP-Line enables you to select from enhanced capabilities such as:

- Border Gateway Protocol (BGP) for multi-homing application.
- Redundant connections for better service resiliency.
- Multiple IP addresses for hosting servers.

Future-proof your business

AAPT IP-Line is an evolving product, meaning you will eventually be able to leverage next generation Ethernet services that will add-value and future-proof your business.

Quality support with insightful tools

When you call AAPT you will receive personal support from highly experienced help desk staff 24*7. Furthermore, AAPT's powerful online reporting and analysis tools provide you with insights into your past and current IP data utilisation.

For prepaid Internet data plans, AAPT also provides email notifications when your usage reaches at least 80%, 90% and 100% of the prepaid data allowance. This enables you to avoid any bill shocks.

Contact AAPT on 1300 016 636 to find out how IP-Line can help your business.
